

XMDF Output Files

- Alternate Viewers
 - HDFViewer
 - HDF Explorer
 - Matlab

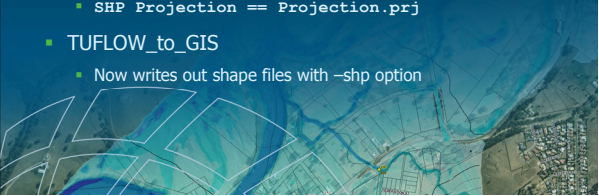

4

ArcGIS file formats

- Now written (and read) by TUFLOW for GIS based TUFLOW outputs
 - 1D results, messages, check files
 - GIS Format == SHP
 - SHP Projection == Projection.prj
- TUFLOW_to_GIS
 - Now writes out shape files with -shp option

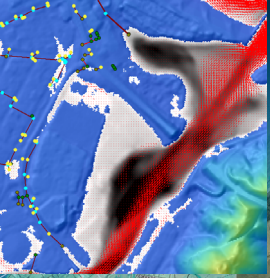

5

ArcGIS file formats

- Three file types
 - _P (points)
 - _L (lines)
 - _R (regions)

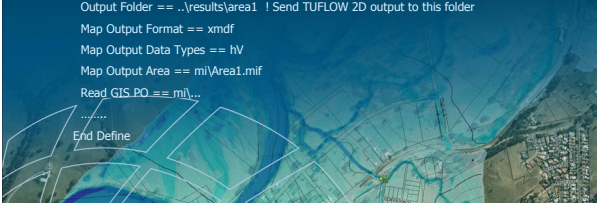

6

User Defined Output

- Model Output == Area1 | Area2
- Output Control File == a.toc that contains blocks such as:

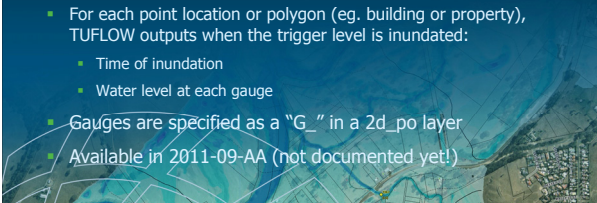

```
Define Output == Area1
Start Map Output == 1
Output Folder == ..\results\area1 ! Send TUFLOW 2D output to this folder
Map Output Format == xmdf
Map Output Data Types == hV
Map Output Area == m\Area1.mif
Read GIS_PO == m\...
.....
End Define
```

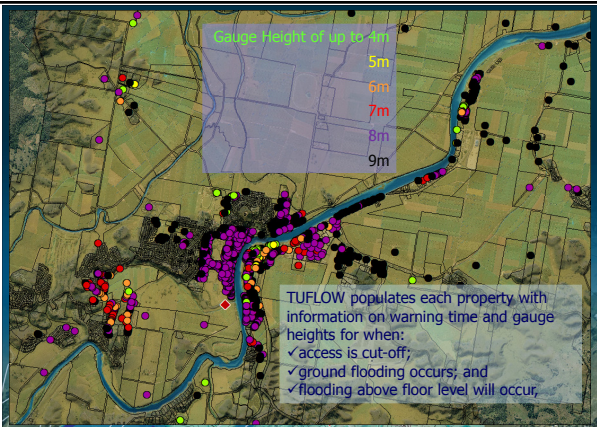

7

Gauge Outputs

- New .tgc command:
Read GIS Gauge Output == m\2d_go_buildings.mif
- Trigger level (eg. floor level) at each GIS object provided otherwise ZC (lowest ZC for a polygon) used
- For each point location or polygon (eg. building or property), TUFLOW outputs when the trigger level is inundated:
 - Time of inundation
 - Water level at each gauge
- Gauges are specified as a "G_" in a 2d_po layer
- Available in 2011-09-AA (not documented yet!)

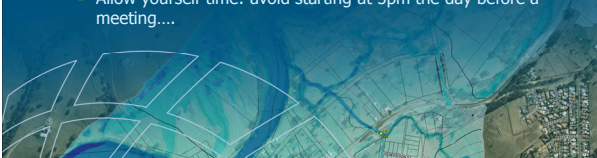

8

Animations - General

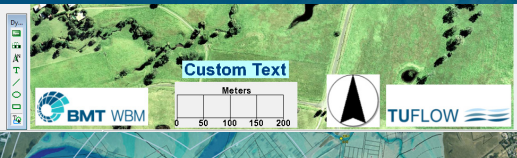

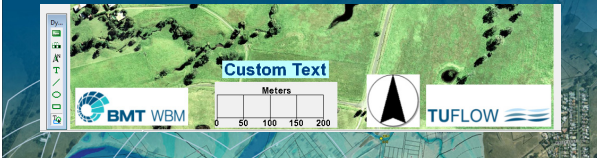

- Tips
 - Output Frequency (high as possible!)
 - Avoid running the animation for long periods where nothing is happening
 - Avoid cluttering the animation (clear and concise)
 - Allow yourself time: avoid starting at 5pm the day before a meeting....

10

Animations in SMS

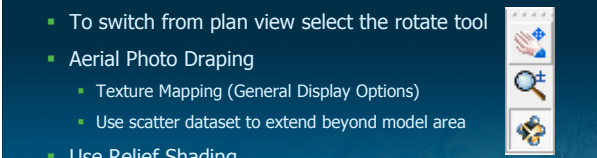

- Annotation Module
 - Logos
 - Scale bars / North Arrows
 - Text

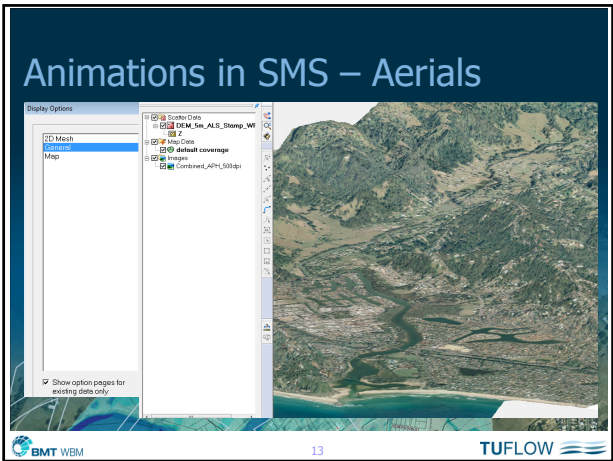

11

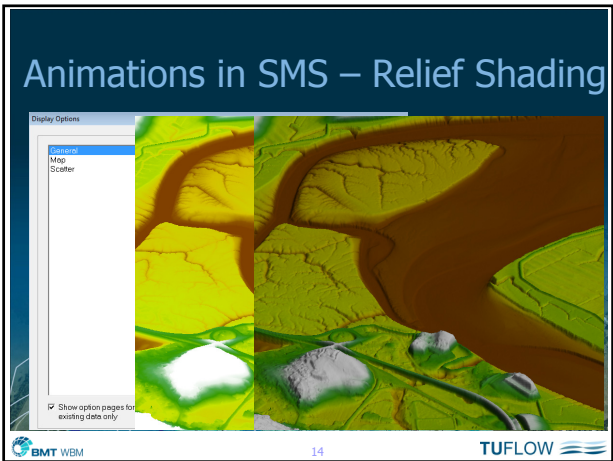

Animations in SMS – 3D

- To switch from plan view select the rotate tool
- Aerial Photo Draping
 - Texture Mapping (General Display Options)
 - Use scatter dataset to extend beyond model area
- Use Relief Shading

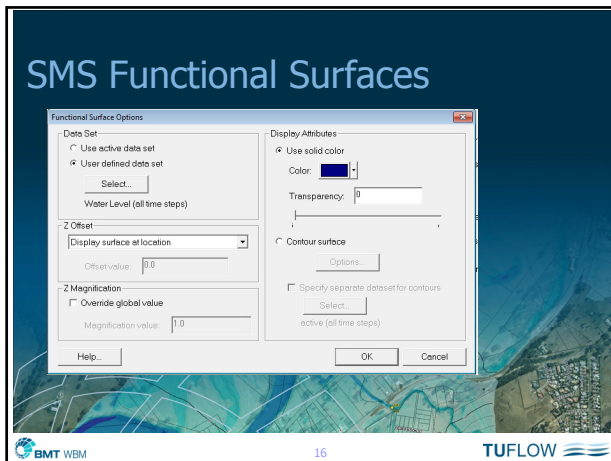

12

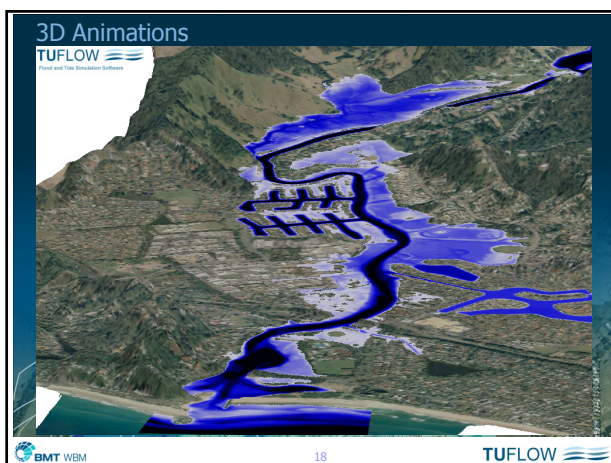

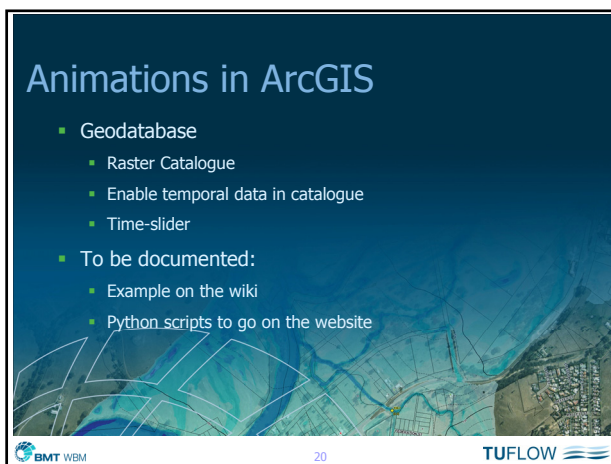

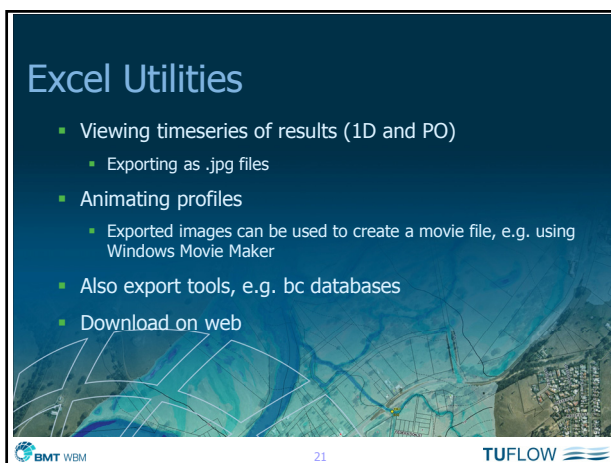

The screenshot shows the Excel Utilities application window. The title bar reads "Excel Utilities". The menu bar includes "File", "Home", "Insert", "Layout", "Formulas", "Data", "Review", "View", "Split/Join", "Account", "Design", "Layout", and "Format". The ribbon is set to "Please enter simulation" and contains three buttons: "Plot IC Results", "Export Active Chart", and "Export Workbook to csv". The main workspace displays a line chart titled "Chart 1". The chart has three data series: "O/C_0280" (green line), "O/C_0270" (red line), and "O/C_0260" (blue line). The x-axis is labeled "Time" and ranges from 0 to 3.5. The y-axis is labeled "Value" and ranges from 0 to 30. The chart shows three curves that rise and then fall, with the green curve being the highest and the blue curve being the lowest. The status bar at the bottom indicates "BMT WBM" and "TUFLOW".

Excel Animations

- Profile, tidal model
- Profile (multiple events)
- Cross-section, levels

23

BMT WBM

TUFLOW

Underutilised Outputs

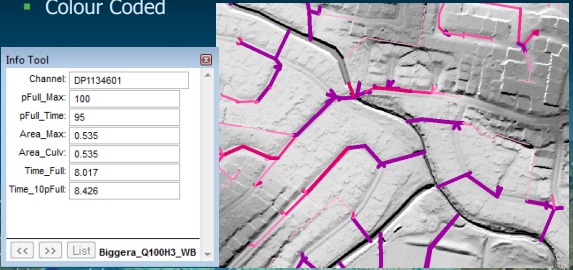

- 1D outputs
 - Culvert Capacity Output
 - Water Level Line Points
- 2D outputs
 - Calibration Points
 - Long Profiles
 - Evacuation Routes

24

Culvert Capacity and Area

- _ccA.mif (or .shp)
- Colour Coded

BMT WBM 25 TUFLOW

Water Level Lines

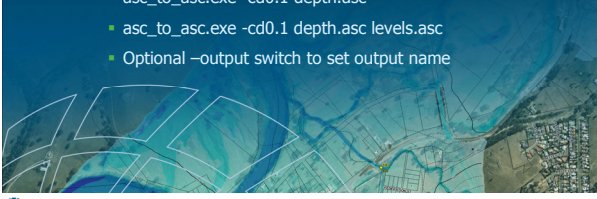

- Two inputs layers
 - Lines (commonly used)
 - Points (less used, but powerful feature)
- Import WLLp check file
 - Inspect Elevations
 - Optional Materials (to assign n values)
- Not used computationally but makes for much nicer looking results / animations

BMT WBM 26 TUFLOW

Cutoff Depths for mapping

- Useful for direct rainfall modelling
 - Map Cutoff Depth == <depth> (.tcf)
- Updated asc_to_asc.exe
 - asc_to_asc.exe -cd0.1 depth.asc
 - asc_to_asc.exe -cd0.1 depth.asc levels.asc
 - Optional -output switch to set output name

BMT WBM 27 TUFLOW

Calibration Points

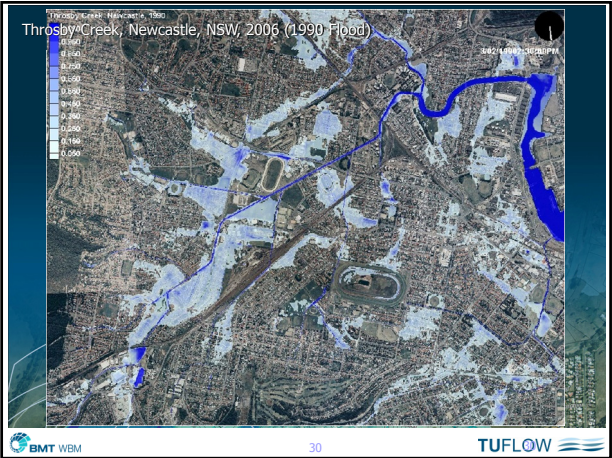

- .tcf command
 - Calibration Points MI File ==
- Assigns the peak water level as an additional attribute
- Up to 10 files can be specified

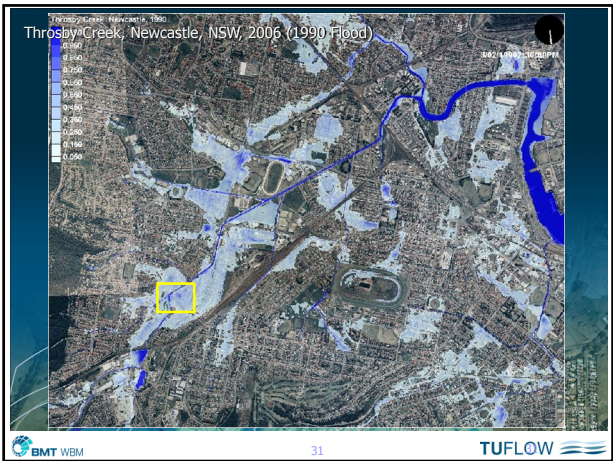

28

Throsby Creek Newcastle

- 1D
 - Sub and super critical flow
 - 700 structures
 - 1,000 pipes, pits and manholes
- 2D
 - Complex overland flows
- Excellent calibration events

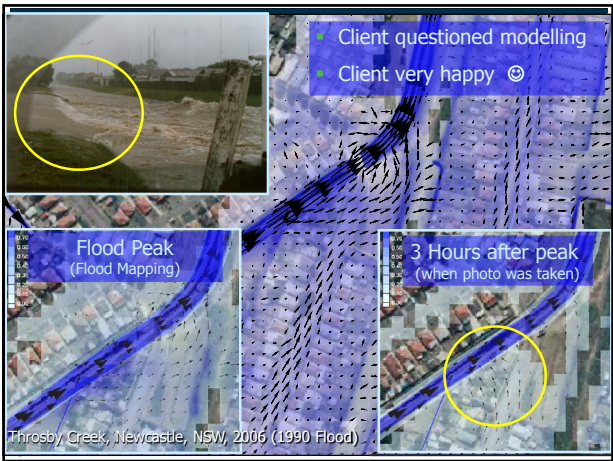

29

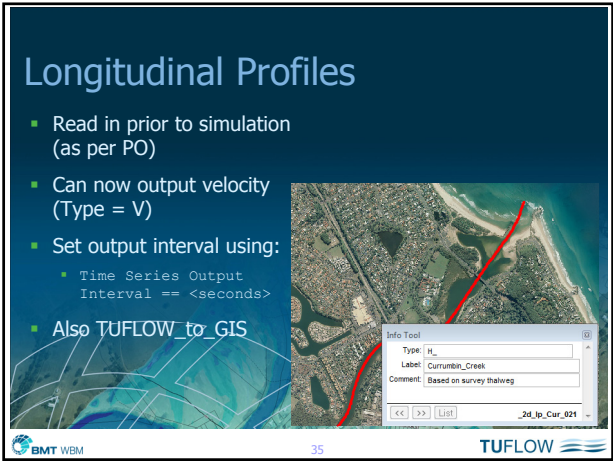

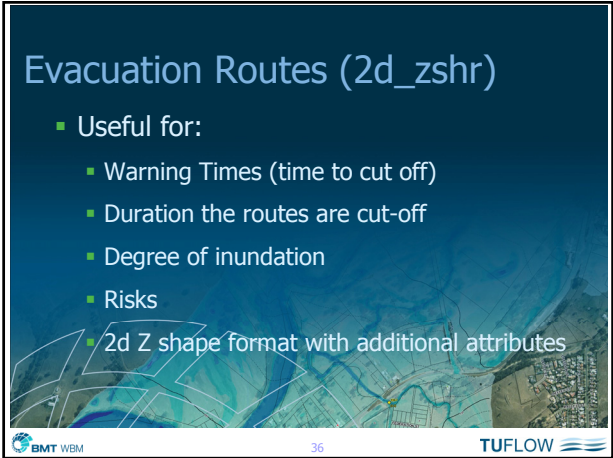

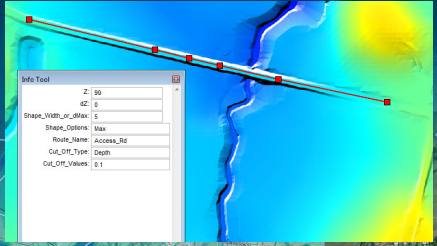

Evacuation Routes (2d_zshr)

- GIS inputs
 - Multiple cut off values possible

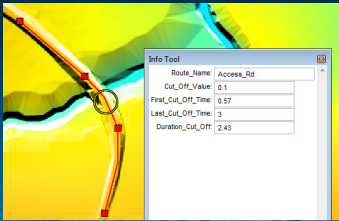

Info Tool	
Z:	99
AZ:	0
Shape_Width_Lc_RMax:	5
Shape_Opacity:	Max
Route_Name:	Access_Rd
Cut_Off_Type:	Depth
Cut_Off_Values:	0.1

37

Evacuation Routes

- Outputs
 - Points
 - Map Output (time varying data)
 - Animation

Info Tool	
Route_Name:	Access_Rd
Cut_Off_Value:	0.1
First_Cut_Off_Time:	0.57
Last_Cut_Off_Time:	3
Duration_Cut_Off:	2.43

38

Discussion

- Any questions?
- Any suggestions?
